

ARMADA

This is an automated risk-based financial monitoring and reporting tool which facilitates capturing specific risks associated with Participating Organisation (“PO”)’s businesses. ARMADA allows Bursa Malaysia to analyse specific risks that may affect the POs’ business and thereafter initiate pre-emptive measures through our engagements with the POs to highlight our regulatory concerns. In addition, ARMADA also facilitates the automation of the generation of the daily, weekly and monthly reporting of Capital Adequacy Requirements (CAR) to Bursa Malaysia.
